Harrods 1912 Catalogue

Motor accessories section.

Notes

To fit everything on this CD specific pages have been taken out of the weekly issues and combined together. The original pages of English Mechanic during this period are of poor quality wood paper and have therefore aged worse than the earlier years.

The PDF files on this CD are of the "text-under image" variety, i.e. using the "select" tool within Adobe Reader program, you can click and drag over an area of text, then right-click "copy" followed by "paste" into another program. Note this text is only "recognised" by a special OCR (Optical Character Recognition) program, and can contain mistakes.

If you want to copy photographs or illustrations from the PDF's into another program, depending on which version of Acrobat Reader you are using, either the "select" or "snapshot" tools are preferred, see the "F.A.Q" on the web site for detailed instructions.

There are additional pages, mostly letters, that are not listed in the contents. But have been included as they occur just before/after the items selected.

By buying this CD you are given re-publishing rights for up to 5% (i.e. about 30 pages) of the content in any year. If you would like to reproduce more than this please contact the publisher through the web site www.englishmechanic.com
